SUMMARY

Software developer with applied experience across full-stack development, cybersecurity, AI/ML, and technical operations. Designed the authentication, RBAC, and database layer for a live multi-role platform (Next.js, TypeScript, Supabase), and built projects ranging from a 7-tool TypeScript suite with custom parsers to a locally hosted LLM chatbot and an award-winning LLM dialogue architecture. Supported a 7,000-user campus on IT helpdesk and ran sprint planning as project manager in a 25-member agile program. AWS- and Enterprise Defense-certified.

SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML/CSS

Frameworks: Next.js, React, Node.js, FastAPI, NestJS, React Native

Databases: Supabase (PostgreSQL, Row-Level Security), PostgreSQL, MySQL, MongoDB

AI / ML: Local LLM inference (Ollama), prompt engineering, LLM integration, scikit-learn, pandas, matplotlib

Cloud / Infrastructure: AWS (IAM), Vercel, Linux, Docker, Cloudflare Tunnel, Git/GitHub

Security: RBAC, IAM and MFA (Okta, Microsoft Authenticator, YubiKey), TLS, audit logging, incident response

Practices: Agile/Scrum, sprint planning, Jira, Notion, Miro, Smartsheet, technical support

EDUCATION

BASc, Application Development

2026

North Seattle College, Seattle, WA

EXPERIENCE

Full-Stack Developer

April 2026 - Present

Next Wave Dev (NWD Central Hub), Remote

- Designed and built the platform's authentication and role-based access control system from the ground up, including Next.js middleware route protection and role guards across admin, client, and contractor roles.
- Authored and evolved the core database schema and Row-Level Security policies (Supabase/PostgreSQL) supporting a full project request-and-approval lifecycle.
- Built the admin user management dashboard with full CRUD and the contractor project dashboard and request-to-join workflow.
- Built threaded messaging and admin announcements with email notifications, and refactored navigation into one shared, role-aware component.

IT Helpdesk Technician

October 2023 - April 2026

North Seattle College, Seattle, WA

- Resolved 30-50+ in-person support requests per week across two campus labs serving approximately 7,000 users.
- Handled password recovery and MFA setup across Microsoft Authenticator, Okta, and YubiKeys, and delivered security awareness training on phishing and password complexity.
- Supported infrastructure projects including deployment of approximately 40 computers for a new campus library.

Project Manager

September 2024 - April 2025

North Seattle College (NSC Events App), Seattle, WA

- Served as PM and primary client liaison for NSC Events, a full-stack web app (React, Next.js, MongoDB) for campus event discovery with Google and Microsoft Calendar integration.
- Owned backlog, sprint planning, and roadmap within a 25-member program coordinating 7 concurrent student-led projects.
- Configured AWS security policies and RBAC for the program's practicum environment; managed documentation in Miro, Notion, and Smartsheet.

CERTIFICATIONS

- Enterprise Defense Administrator (EDA), INE
- AWS Academy Cloud Foundations
- AWS Academy Cloud Developing
- AWS Academy Machine Learning Foundations
- AWS Academy Generative AI Foundations

PROJECTS

RO Dev Suite | Next.js 16, TypeScript, WebGL2 Personal project

- Architected a 7-tool suite sharing one registry, file-access layer, and IndexedDB-cached index pipeline; all data stays client-side via the File System Access API with zero server-side storage.
- Wrote binary and Lua parsers from scratch for five undocumented legacy formats, reverse-engineered 2,373 asset IDs from a client executable, and maintained a 530+ test Vitest/Playwright suite.

BARD: Batched Asynchronous Response Delivery | Capstone, Godot 4, Ollama Capstone

- **Won 1st Place, Hands-On Demo category, at the NSC Capstone Showcase 2026** (audience-voted, live gameplay).
- Designed a pre-rendering architecture that batches LLM inference at the start of each in-game day, eliminating real-time inference latency for NPC dialogue in a 2D action RPG, with a validation, repair, and fallback chain for AI-generated output.

Project Maki | Node.js, Ollama, Gemma 4 E4B Personal project

- Built a locally hosted LLM Discord chatbot with dual personas, per-user persistent memory using a multi-pass extraction pipeline with TTL-tiered fact expiration, a five-tier familiarity system, and loop detection with self-correction.

Opportunity Center Multilingual Chatbot | Next.js, FastAPI, Ollama Team of 4

- Served as project manager and frontend developer on a privacy-first chatbot serving Spanish, Vietnamese, Swahili, and Chinese-speaking clients, with all inference run locally, RBAC, audit logging, and TLS, designed for FERPA and HIPAA compliance.

Security Incident Detection-Time Analysis | Python, pandas, scikit-learn, FastAPI Course project

- Built an end-to-end pipeline predicting incident time-to-detection; the selected model reached $R^2 = 0.80$ with 97% of predictions within 20% of actual, served through a FastAPI backend and Next.js dashboard.

Self-Hosted Home Server | Ubuntu Server, Docker Compose, Cloudflare Tunnel Personal project

- Deployed and maintain a home server running Nextcloud and Immich as Docker containers, with secure remote access through Cloudflare Tunnel and no port forwarding; migrated approximately 9,800 photos with metadata preserved.

NSC AI Tutor | Claude Artifact, prompt engineering Deployed

- Designed and deployed an AI tutoring chatbot for Application Development students, with prompts that guide problem decomposition rather than giving direct answers; shared as a zero-install link.
